

DZD Solar instals over 2,000 PVs in one year

DZD Solar instals over 2,000 PVs in one year

(CIANEWS) - DZD Solar has implemented more than 2,000 photovoltaic power plants since the summer of 2022. Luboš Vrbata, the head of DZ Dražice's photovoltaic division, said that DZD Solar's analyses show that the market for solar power plants is not cooling down significantly. There is only a spillover of demand between segments. Companies are focusing more on projects for industrial properties whose owners are trying to reduce their dependence on expensive energy. Further, he expects a 15 to 20% reduction in the number of companies involved in PV sales and installation in the country.
